## **Disciplinary marketing of Inflorescences (fiorirecisi) of Canapa Sativa L. in Italy**

PURPOSE OF THE PRESENTEDISCIPLINARE is to define the Good Practices for the commercialization of inflorescences (cut flowers) of Canapa sativa L. starting from the verification of the various phases from the cultivation by sowing or planting, harvesting, transformation of the Conservation Criteria of plant material deriving from cultivations of variety of Cannabissativa.L. da apply for the development of the production chain at the national level. Particular attention is given to the respect of the criteria of environmental sustainability, of valorisation of the culture and its products in the Italian territory, of lawfulness and safety of production, attention to the final consumer and to all the subjects of the chain. The production chain is divided into production cycles such as 'seed - flowering plant' ocicles 'seed - seedling - flowering plant'. For the second production cycle the present disciplinary proposes a model of traceability of the supply chain to be adopted on a voluntary basis, which therefore has a positive value. Art.1 OGGETTO 1.1 Definizione Oggetto of this Disciplinary is the marketing of vegetative portions (cut flowers) of Cannabis Sativa L. in conformity with the L. n. 242/2016 and the community standards of the sector, aimed at promoting the cultivation, use and final consumption of the possible products of hemp, coming primarily from local supply chains. The materials that comply with this specification fall within the objectives and products envisaged by L. n. 242/2016, articles 1 and 2. The marketing of cannabis, which is the subject of this specification, must be carried out in compliance with the provisions of Law 242/2016 regarding the cultivation varieties allowed, the possible products obtainable, the THC limits, the obligations of the producer in terms of traceability and traceability of the product. 1.2 Denomination

"Inflorescence of coop The Sicilian Quality cultivated in Italy, traceability of quality" The denomination La Siciliana Quality is reserved to the product that meets the conditions and requirements established in this production disciplinary and that is cultivated exclusively in Italy, with particular attention to the productions on the territory of the Sicily Region. The denomination is protected by a Trademark and a Logo attached to the present disciplinary. Art.2 DESTINATARI Il presente Disciplinary is exclusively intended for products marketed by the company La Siciliana Quality Srl. Art.3 C

FEATURES BOTANICHE DEL PRODOTTO The product covered by this specification is the only non-pollinated female inflorescence (cut flowers) of varieties of Cannabis sativa. L. included in the Common catalog of varieties of plant species that are allowed to be grown and marketed in the territories of the European Union (of which to the article 17 of the directive 2002/53 / CE) and with values of active principle THC within the limits of the law of the 0.2%. The product derives and it is exclusively destined to the floriculture activity according to the art. 2 c. 2 lett. g) of Law 242 / 2016. Art.4 REE DI PRODUZIONE Il Italian territory only

Art.5 ELEMENTS THAT PRODUCE THE ORIGIN 5.1 Verifica materiale di origine It is prescribed the purchase of a certified genetic product -semente -o of seedlings both of varieties belonging to the European varietal catalog. It is compulsory to verify from the producer of the conservation of the seed card purchased, for at least 12 months from sowing,

made the obligation to maintain the traceability documents for at least 24 months (depending on the shelf-life of the products obtained). from cultivation with plant, the seedling must be purchased from an agricultural object with a nursery license and the sale must be accompanied by a phytosanitary passport certifying the variety of the plant, the genetic material of origin and the absence of pathogens. passport identification code). 5.2 Traceability of the marketing process. Each phase of the marketing process is monitored by documenting, for each, the inputs (incoming products) and outputs (output products). The traceability and traceability of the product throughout the marketing phase is guaranteed by this documentation, integrated by the verification through the certified laboratory analyzes, for each lot purchased, in order to measure the active ingredients. 5.2.1 Elements to prove the traceability The product referred to in this specification will be accompanied by a QR code / barreapposto code on the packaging (box / boxes, envelopes, cans, etc.) from which it is possible to trace the following information: lot number of production, variety semecon relative lot number, seedling, date, report number of the results of the analyzes with indication of the laboratory. The packaging will be provided with a warranty seal in order to guarantee the integrity of the product until the moment of opening. Art.7 PRODUCT REQUIREMENTS 7.3 Fasedipost-collection: cleaningandessiccazione Within 4 hours of collection, the cleaning and drying phases of the inflorescences must be started in order to maintain the healthiness of the product. The harvested product will be stored in blistered crates or in bags of material that allow transpiration. All the materials used for containment and in contact with the product must meet the mandatory requirements regarding M.O.C.A. (Contact materials with food). The first operation consists of a coarse cleaning of the leaf apparatus, with manual or mechanized removal of the larger leaves, operation to be carried out away from direct light and heat sources. drying must take place in a local authorized for the farm food processing or traditional rural structures in compliance with the optimal environmental conditions for drying the cannabis sativa. The drying room must have a moisture content of between 40% and 55%, adequate ventilation to product volumes and a temperature between 17 ° C and 24 °. The dried product must have a moisture content between 8% and a maximum of 15%

It is advisable to reach the level of humidity above, gradually in order to maintain the properties of the inflorescence .. The final product, meeting the requirements in point 7.5, after a weight loss of about 75%, must be preferably kept at a relative humidity of between 58% and 62%. The person who provides for drying, in the case of not being a farmer himself, must be involved in a specific supply specification. The use of any biocide or additive during post harvest. The inflorescences must be eliminated with evidence of moldiness that could compromise the hygienic safety of the product. 7.4 Tanning and handling of dried material The dried material must undergo a tanning period. The dried inflorescences will be stored in airtight containers, certified for contact with food, avoiding filling all available space. It will be necessary to check the product almost daily, opening the containers in order to check the residual moisture, any mold principles and to favor a minimum change of air. After a period of time of at least twenty days, the inflorescence must be cleaned from the last remaining
